

ANNEX 2

EVALUATION METHOD
of the
TENDER SPECIFICATIONS

concerning

call for tenders for pharmaceuticals
(Amgros Tendering 2020 - 2.620.b)

DETAILS OF THE EVALUATION METHOD USED

The award criterion is the best price-quality ratio.

In the evaluation of the tenders, a scoring model will be used according to which the tenders will be evaluated on the basis of the sub-criteria stated in clause 5 of the tender specifications.

Evaluation of the sub-criterion "price"

Tender prices will be calculated using a method where the prices are converted to points in a non-linear model. The lowest price will be awarded 6 points, and the other tender prices will be converted to points according to the following formula:

$$\text{Points awarded to the tender} = 6 * \text{lowest price/tender price}$$

Evaluation of the other sub-criteria

The points to be awarded to each tender for compliance with the other sub-criteria are determined using the following absolute scale:

Best compliance with the criterion	6
Extremely good/excellent compliance with the criterion	5
Good/very satisfactory compliance with the criterion	4
Average/satisfactory compliance with the criterion	3
A little below average/satisfactory compliance with the criterion	2
Much below average/satisfactory compliance with the criterion	1
Poor compliance with the criterion	0

The tenders will be evaluated against an absolute standard for each sub-criterion. Hence, it is not a foregone conclusion that one or more tenders will be awarded the highest possible score on the scale for each of the sub-criteria.

Overall evaluation

The number of points awarded for each sub-criterion will be included proportionally in the overall tender evaluation according to the following formula:

$$\text{Number of points for a given sub-criterion} * \text{the weighting of the sub-criterion specified in clause 5 of the tender specifications.}$$

The overall score of each tender is calculated as the sum of the points from such conversion of all sub-criteria.

The order of priority of the framework agreements concluded under each procurement number will be such that framework agreement 1 will be entered into with the supplier who has the highest total score and who has thus offered the most economically advantageous tender, framework agreement 2 with the supplier offering the second most economically advantageous tender, etc.
